A / EDUCATION

University of Queensland
B. Adv. Business (Hons)
Finance + Business Analytics double major
feb 2023 - dec 2027 (penultimate year)

KEY COURSES

Corporate Finance	FINM2415
Asset Pricing	FINM2416
Derivatives & Risk Mgmt	FINM3405
Financial Mgmt for Business	FINM2412
Business Analytics Project	BSAN4204
Machine Learning for Business	BSAN2205
Prescriptive Analytics	BSAN3209
Data Visualisation	BSAN3204
Methods of Business Analytics	BSAN2204

B / SKILLS

FINANCIAL ANALYSIS
DCF valuation · scenario + sensitivity modelling · derivatives pricing · financial statement analysis · Excel

DATA & ANALYTICS
Python · SQL · R · pandas · scikit-learn · backtesting · dashboards

ENGINEERING
TypeScript · SvelteKit · Cloudflare Workers · LLM pipelines

COMPLIANCE
Privacy Act 1988 + APPs · My Health Records Act 2012 · MBS

C / ADDITIONAL

SOCIETIES
UQ Economics Society + Business Analytics Network Association (2023-).

LANGUAGES
English (native) · Japanese (JLPT N4)

VOLUNTEERING
Weekly BBQ for people experiencing homelessness (2020-2022).

01 / SUMMARY

Penultimate-year UQ Finance + Business Analytics (Honours) student with coursework in corporate finance, asset pricing, and derivatives. I build valuation and sensitivity models in Excel and write backtests and data pipelines in Python; two of the projects below run daily pipelines.

I also do consulting work under my company, Tek Monkeys; the paying client is a paediatric orthopaedic practice. I scoped and shipped their billing validator and still support it.

02 / EXPERIENCE

Software & AI Pipeline Consultant @ Tek Monkeys — 2024 - present

consulting through my own company · paediatric orthopaedic practice · Brisbane, QLD

- Interviewed both surgeons about their billing workflow, then designed and shipped **Itemate**, the practice's MBS billing validator; it now runs as a managed service and I keep iterating on it.
- Sole technical and commercial contact for the practice, covering everything from requirements to ongoing support.

Customer Service @ Brisbane Airport — 2023 - feb 2026

emirates leisure retail + partner venues · four f&b venues, both terminals

- Three years of high-volume customer service alongside full-time study, where most problems had to be solved on the spot; progressed from counter service to specialty coffee at an award-winning roaster's flagship.

03 / PROJECTS & SERVICES

Itemate MBS billing validation — 2026 - present

itemate.net · commercial product, in production

- Validates surgical billing against the 6,039-item Medicare Benefits Schedule: the practice pastes an operative note, an LLM normalises it, and a deterministic matcher returns the billable items.
- The matcher learns from the practice's corrections, which has cut manual checking and lowered the risk of billing errors.
- Runs in production for a two-surgeon paediatric orthopaedic practice as a paid managed service.

Monkey vs Machine S&P 500 backtesting experiment — 2026 - present

mvm-dashboard.pages.dev · public dashboard, updated daily

- Backtested a gradient-boosting trader against random portfolios and SPY buy-and-hold over five years of S&P 500 prices, with weekly rebalancing and 5 bps transaction costs. A daily pipeline now runs the race live on a public dashboard.

GoCard Insights transport cost-benefit analytics — feb 2026

gocard.nickwfraser.dev

- Built a research project end to end: a live mode-choice cost model over Go Card trip history that compares public transport against driving after Translink's 50¢ flat-fare reform, with a daily fuel-price pipeline against the QLD FPQ API and a cost engine verified by 24 unit tests.

RSNA Knee Abnormality Detection medical imaging · Kaggle — 2026 - present

kaggle.com · efficiency-track entry, in progress

- Teaching neural networks to spot knee injuries on MRI scans. I prepared 4,407 scans for training, trained five models in PyTorch, and combined them into one entry that scores 0.799 on the public leaderboard and runs in about ten minutes.

SEE MORE Every project here is live and open to try at **nickwfraser.dev**, with write-ups and the code behind them.
