Asset Pricing	FINM2416
Derivatives & Risk Mgmt	FINM3405
Financial Mgmt for Business	FINM2412
Business Analytics Project	BSAN4204
Machine Learning for Business	BSAN2205
Prescriptive Analytics	BSAN3209
Data Visualisation	BSAN3204
Methods of Business Analytics	BSAN2204

B / SKILLS

FINANCIAL ANALYSIS

DCF valuation · scenario +
sensitivity modelling · derivatives
pricing · financial statement
analysis · Excel

DATA & ANALYTICS

Python · SQL · R · pandas · scikit-
learn · backtesting · dashboards

ENGINEERING

TypeScript · SvelteKit · Cloudflare
Workers · LLM pipelines

COMPLIANCE

Privacy Act 1988 + APPs · My Health
Records Act 2012 · MBS

C / ADDITIONAL

SOCIETIES

UQ Economics Society + Business Analytics
Network Association (2023-).

LANGUAGES

English (native) · Japanese (JLPT N4)

VOLUNTEERING

Weekly BBQ for people experiencing
homelessness (2020-2022).

01 / SUMMARY

Penultimate-year [UQ Finance + Business Analytics \(Honours\)](#) student, GPA 5.5/7, trained in corporate finance, asset pricing, and derivatives. I take the analysis end to end: valuation and sensitivity models in Excel, backtests and data pipelines in Python, and dashboards that stay live once they ship. Founder of Tek Monkeys, a Brisbane consultancy whose client is a paediatric orthopaedic practice, so I have scoped, delivered, and supported real work for a paying client.

02 / EXPERIENCE

Founder & Consultant @ Tek Monkeys

2024 - present

brisbane it consultancy · paediatric orthopaedic practice · Brisbane, QLD

- Scoped, designed, and shipped **Itemate**, the practice's MBS billing validator, after workflow interviews with both surgeons; delivered as a managed service and still iterating on it.
- Sole technical and commercial contact for the practice: requirements, delivery, and ongoing support, all handled under the Privacy Act 1988 (APPs) and the My Health Records Act 2012.

Customer Service @ Brisbane Airport

2023 - feb 2026

emirates leisure retail + partner venues · four f&b venues, both terminals

- Three years of high-volume customer service alongside full-time study, with daily exposure to problems that had to be resolved on the spot; progressed from counter service to specialty coffee at an award-winning roaster's flagship.

03 / ANALYTICAL PROJECTS

Monkey vs Machine [S&P 500 backtesting experiment](#)

2026 - present

[mvm-dashboard.pages.dev](#) · public dashboard, updated daily

[Python](#) [scikit-learn](#) [backtesting](#) [SPY benchmark](#)

- Backtested a gradient-boosting trader against 100,000 random portfolios and SPY buy-and-hold over five years of S&P 500 prices, with weekly rebalancing, 5 bps transaction costs, and a feature set constructed to avoid lookahead bias.
- Runs as a live experiment rather than a finished backtest: a scheduled daily pipeline advances the race and publishes the model's standing against the random portfolios to a public dashboard.

GoCard Insights [transport cost-benefit analytics](#)

feb 2026

[gocard.nickwfraser.dev](#)

[cost modelling](#) [sensitivity analysis](#) [SQL](#) [TypeScript](#)

- Built the BSAN4204 research project end to end: a live mode-choice cost model over Go Card trip history that compares public transport against driving after Translink's 50¢ flat-fare reform.
- Wrote a daily fuel-price pipeline against the QLD FPQ API; the cost engine reconciles to manual spreadsheet workings within \$0.50 per week across 24 unit tests.

Itemate [MBS billing validation](#)

2026 - present

[itemate.nickwfraser.dev](#) · in production for a two-surgeon practice

[process automation](#) [compliance](#) [Claude API](#) [97 tests + CI](#)

- Automated billing validation against the 6,039-item Medicare Benefits Schedule, pairing an LLM normalisation step with a deterministic matcher; cut manual checking and lowered billing-error risk for the practice.
